Connector to IBM Records Manager		●
Production Scanning: Support for Multiple High-speed Content Pathways		●
Full API for Application Integration and Customization		●
Content Encryption		Option
Sever-Side OCR Module		Option

About Xerox DocuShare

Addressing both the basic and complex requirements of Enterprise Content Management (ECM), the Xerox DocuShare family of products offers an innovative solution: two focused ECM applications built on one common platform. Xerox DocuShare enables document management collaboration, review and approval, and Web publishing to support information sharing at all points in the enterprise by every knowledge worker. Xerox DocuShare CPX offers the advanced ECM functionality required for integrating and automating content, sophisticated collaboration, and business process management around specific operational tasks.

And all DocuShare products are built on the Xerox Enterprise Content Platform, a highly-scalable Java 2EE application designed for large volumes of content, users, and traffic. This common and easily extensible platform empowers organizations to rapidly broaden their DocuShare installation to include both DocuShare and DocuShare CPX on the same server instance, and through the addition of unlimited users with flexible levels of access. Upgrading users to higher levels of access or moving from a basic DocuShare installation to DocuShare CPX can be accomplished through a simple license key, eliminating the need to migrate content or endure system downtime or service interruption. Imagine the possibilities.
