

# Key New Features of FlexiCapture 9.0 vs. FormReader 6.5 Enterprise

## Full compatibility between standalone and distributed installations

- Project created in standalone installation can be used in distributed installation and vice versa. It allows quick scalability and updates to high-volume versions.

## Improved failure resistance

### Highly scalable Processing Server

- Highly powerful and scalable Processing Server that enables automatic load balancing and processing nodes management.

## Workflow enhancements

- By-document processing - selected documents can be processed separately from the batch with changed priority
- Separate documents from a batch, which have nothing to verify, can be processed fully automatically in unattended mode
- Problem documents can be separated from main stream to the Exception Queue and processed by special operator.

## Windows security support

- FlexiCapture can use standard Windows security setting to identify the product users, which simplify the product setup and using.

## Remote stations

- Scanning Station can be installed remotely and connect the server via HTTP.
- Monitoring Station has Web-based interface and can operate remotely by using a Web browser.

## Flexible integration and customization capabilities

- Web-service API of Processing Server allows using the capture service as an unattended component in external applications and workflows.
- Capture process can be easily and flexibly customized by using scripting of main processing events including import, export, rules etc.

## Technology improvements of FlexiCapture 9.0 as compared to FormReader 6.5 Desktop/EE

- Advanced multi-paging in FlexiLayouts
- Separation of batches or documents by empty, bar-code or patch-code sheets during import
- Automation and simplification of fixed forms template creation
